Query	Candidate 1	Candidate 2

Match objects and describe similarities and differences.

Buildings are different structures with distinct designs and heights.

Trees and their arrangements are different between the two images.

Buildings have similar shape. The colors are similar, with reflective glass.

There are trees with green foliage in the foreground of the query image.

Rank their similarity to the query.

While the specific buildings do not match, the presence of high-rise buildings indicates that the candidate could be in the vicinity of the query image, albeit not the exact location.

The candidate image has a high-rise building with a distinctive peak that matches the query image. This unique architectural feature increases the likelihood of the candidate being at the same place as the query.
